# Oracle Database Migration

## Stages

Assess / Evaluate

Manual

Cloud Premigration Advisor Tool (CPAT)

Choose Product

Zero Downtime Migration (ZDM)

Database Migration Service (DMS)

Migrate

# Assessing / Evaluating a Migration

Cloud Premigration Advisor Tool (CPAT)

Assess /  
Evaluate

CPAT

ZDM

CPAT helps determine the suitability of migrating an Oracle database instance to one of Oracle's Cloud offerings

- Warns about any features used by source database that aren't supported in the target
- Makes suggestions for remedial changes and/or parameters to use for the Data Pump and GoldenGate operations
- Optionally generates remedial scripts for failing checks that can be run against the source database

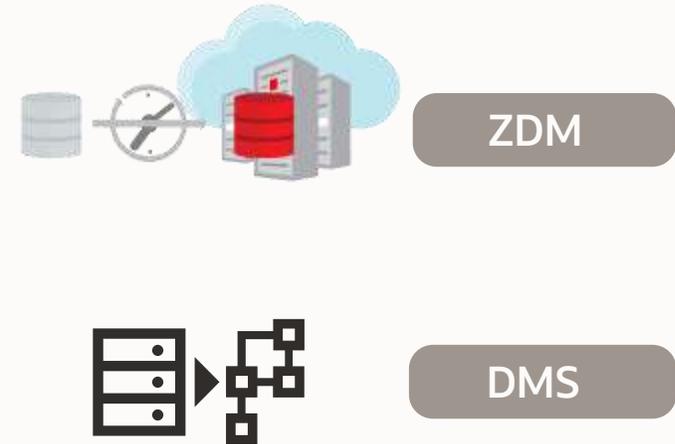

# Oracle Database Migration

## Migration Products

Choose  
Products

Customers can choose products and migration workflows based on source/target support and migration requirements

- ZDM works as the main engine supporting most methods/sources/targets and it is based on CLI
- DMS uses ZDM under the covers and allows for logical offline/online migration with a User Interface to OCI Native Database Services

# Oracle Zero Downtime Migration

## Your Benefits

**Simple**

**End-to-End  
Automation**

**Leverages  
Oracle MAA  
Best Practices**

**Zero  
Data Loss**

**Free**

# How it works – Zero Downtime Migration

## Product Overview

### Simple

Single-button approach

### Comprehensive

MAA compliant

Resumable

Dry-run option

Customizable User Actions

Automated Encryption

### Fleet scale

Centralized

Scheduled operations

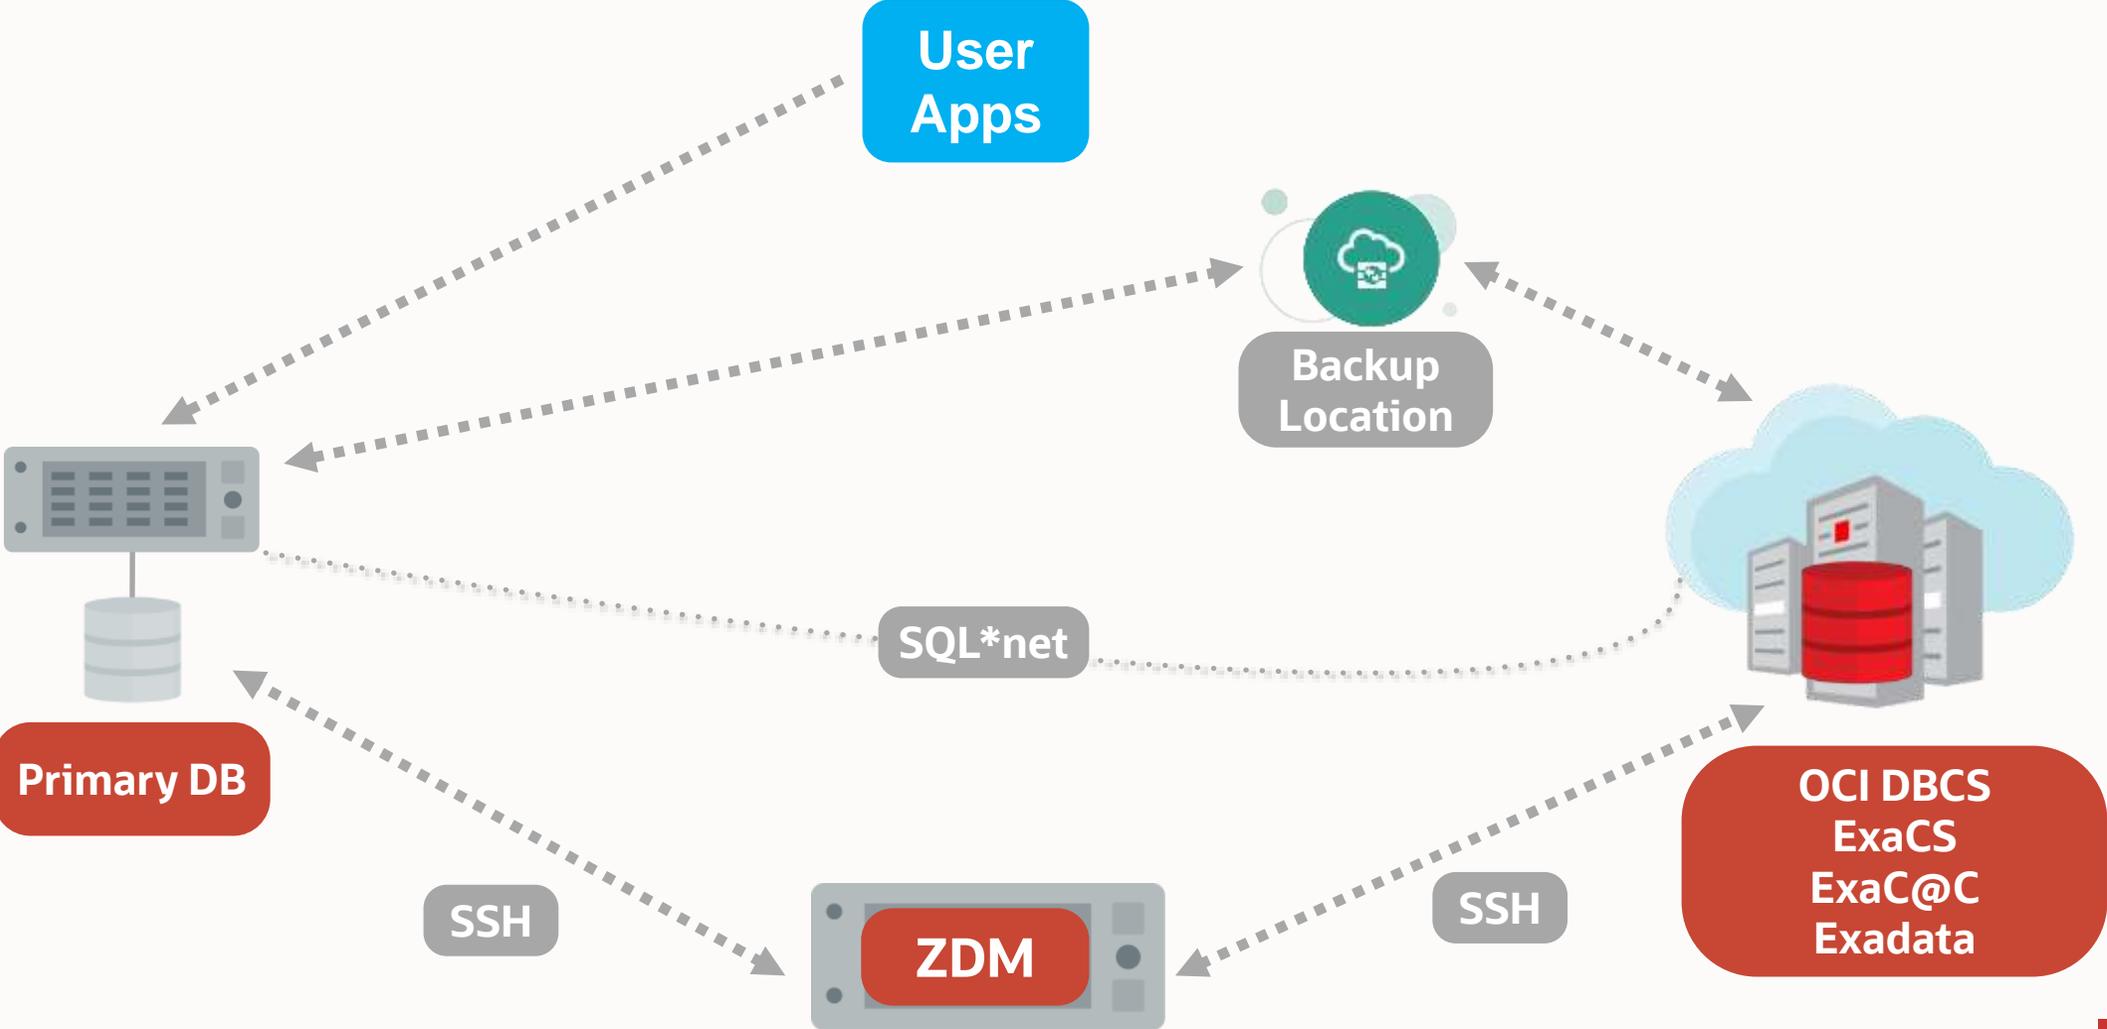

Audit trail

Migrations in parallel

Jobs framework

## Architecture – Physical Migration

# How it works – Zero Downtime Migration

## Architecture – Logical Migration

# Zero Downtime Migration

## Features & Functionality

### Source Databases

SE & EE On-Premises

**ORACLE**

11g, 12c, 18c, 19c, 21c

**ORACLE**  
**AWS RDS**

### Source Platforms

Physical &  
Logical Migration

**AIX**

**ORACLE**  
Solaris

Logical  
Migration Only

### Supported Targets

DBCS

ExaCS, ExaC@C  
Exadata

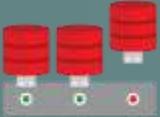

ATP / ADW

# Zero Downtime Migration

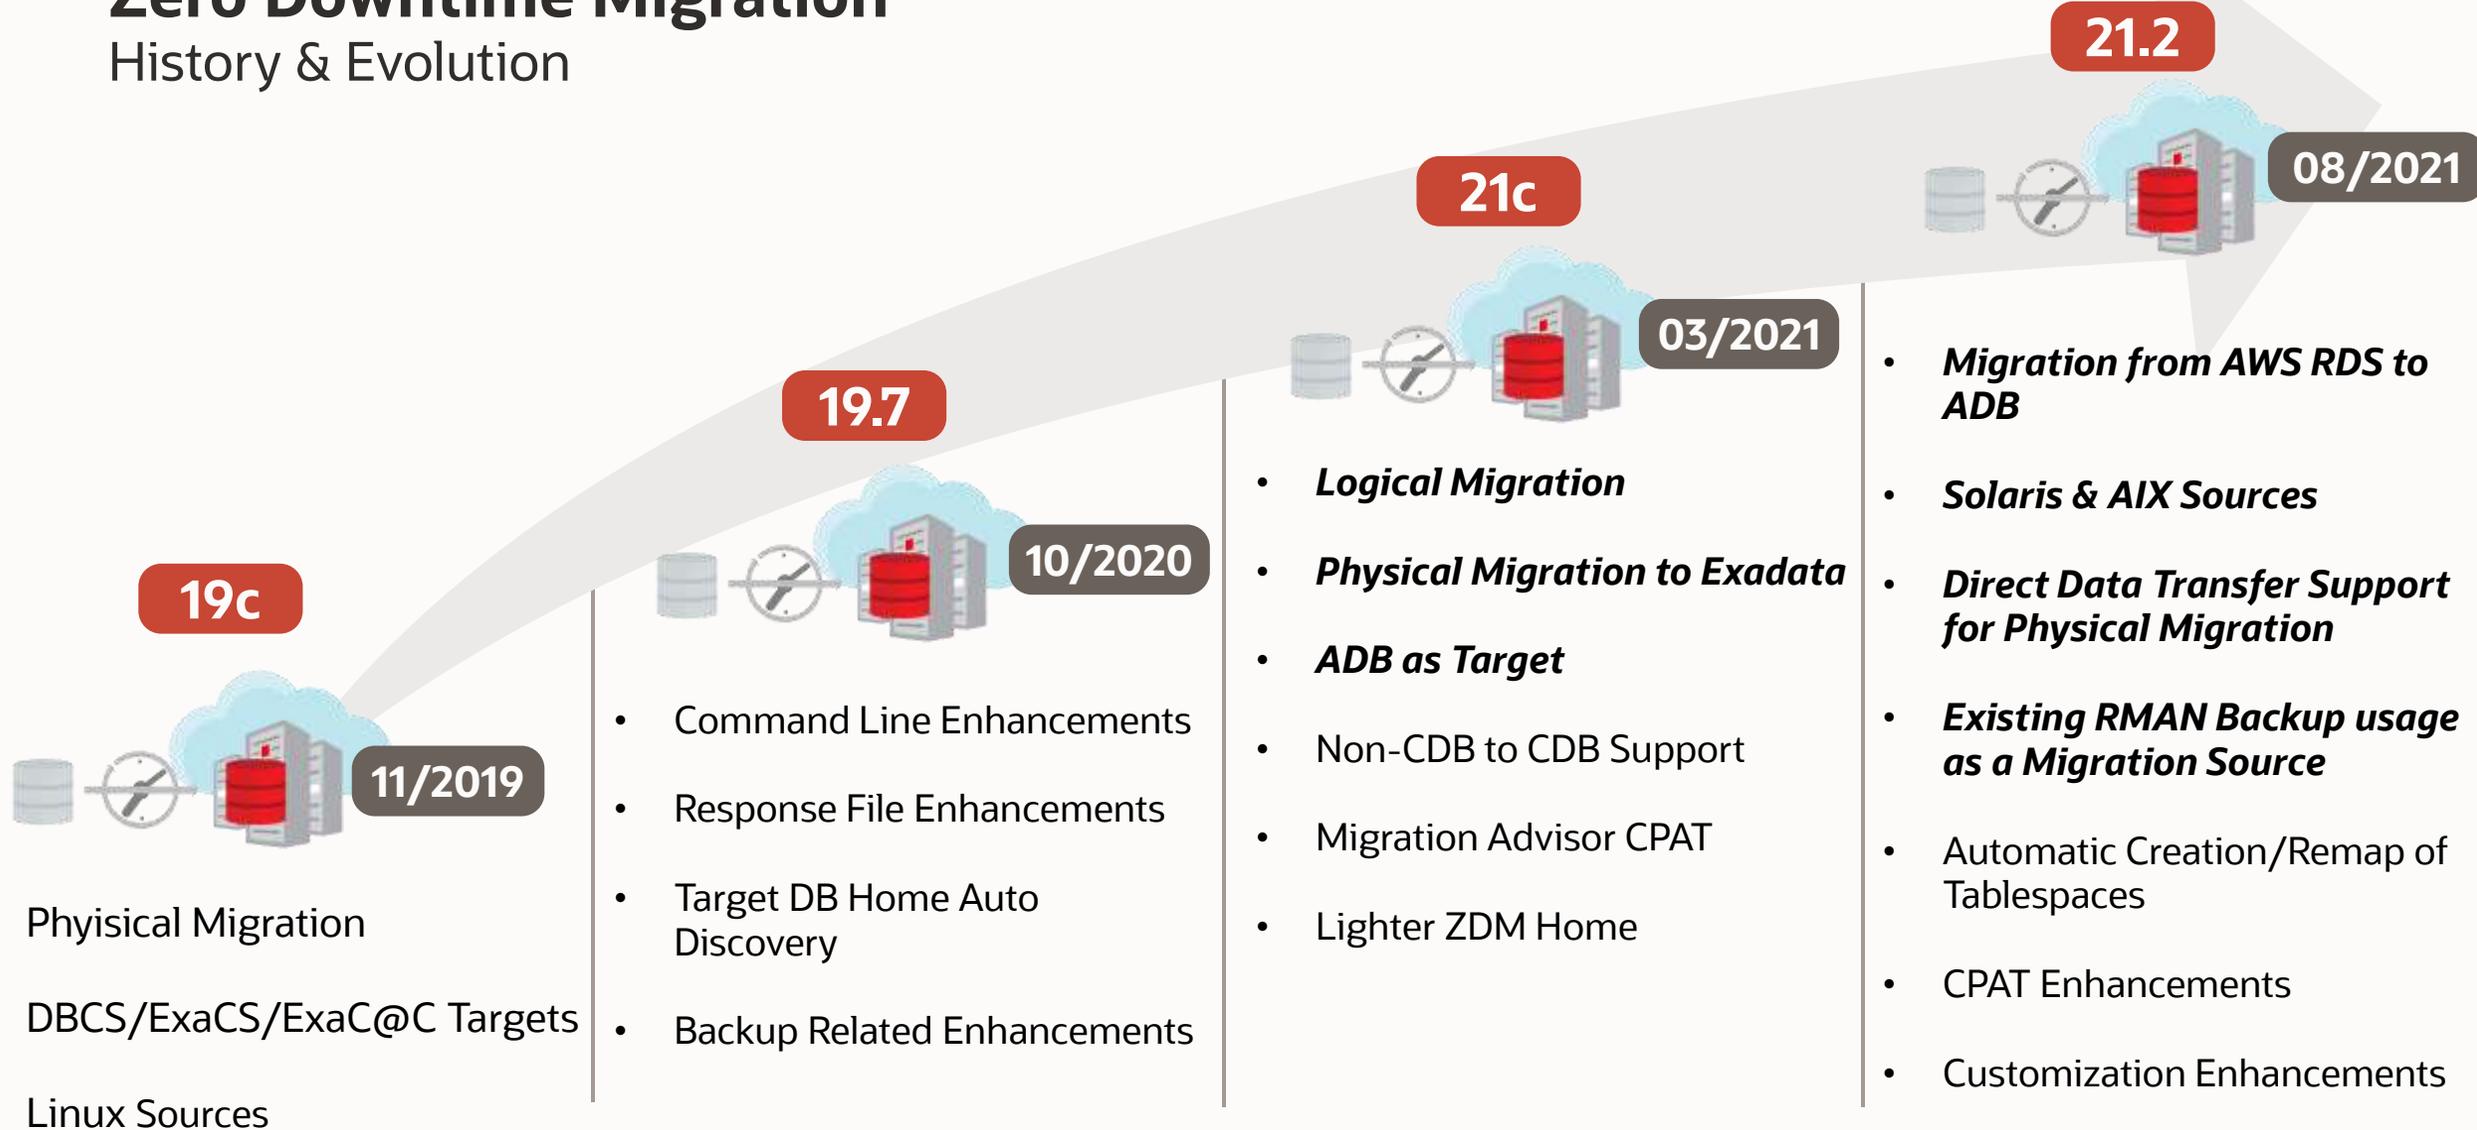

## Features & Functionality

Non-CDB to CDB	Methodologies	In-Flight Upgrade	Technologies
 	 Physical  Logical 	  Logical Migration Only	 RMAN  Data Pump  Data Guard  GoldenGate
