

Az Autonomous Database magas és maximális rendelkezésre állása

Farkas Miklós, Account Cloud Engineer

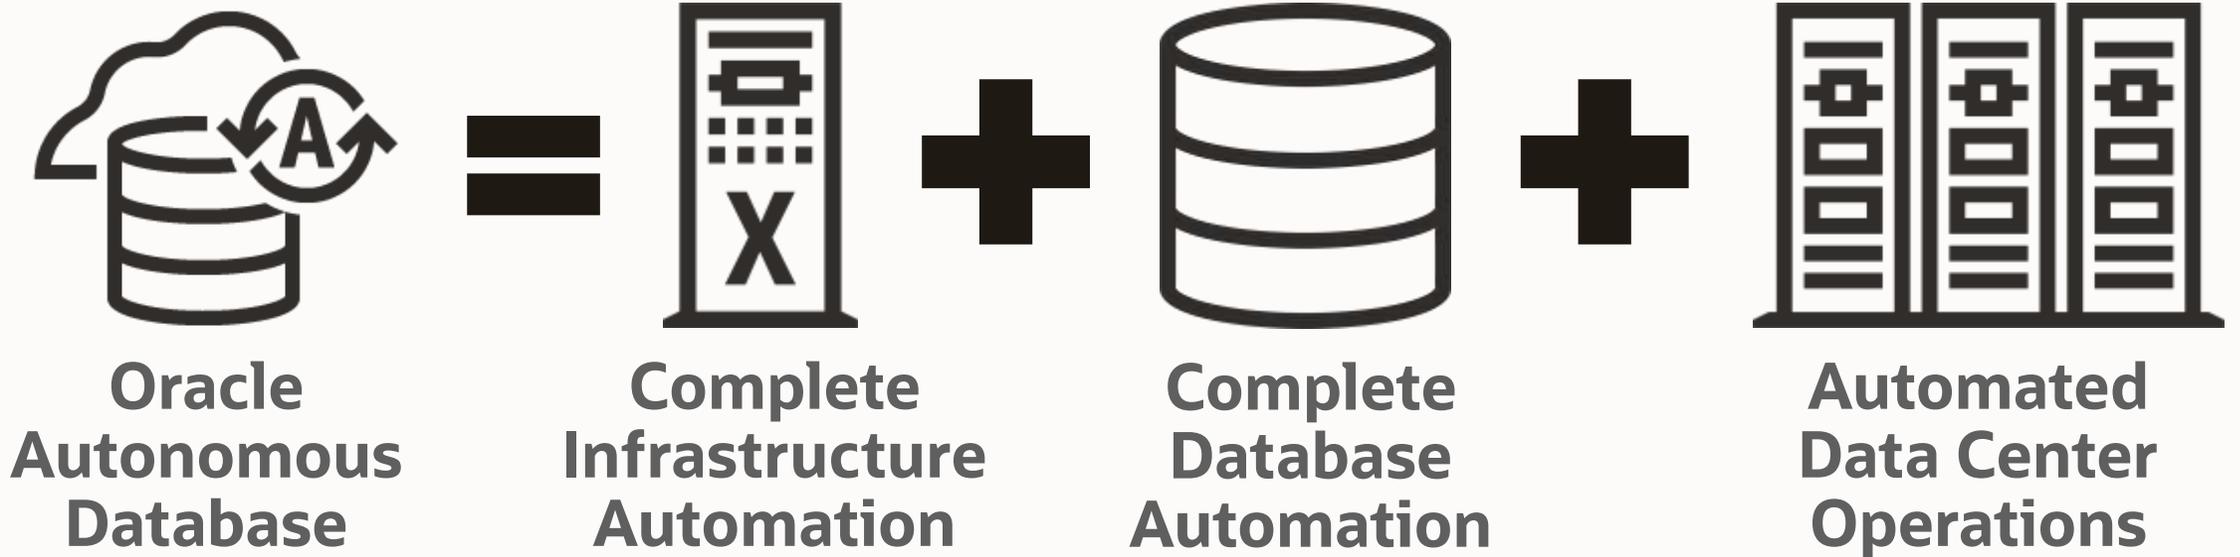

Sárecz Lajos, Business Development Manager

What is Autonomous Database?

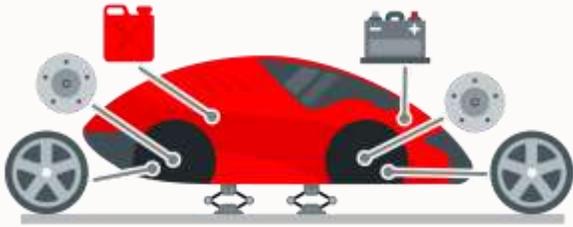

Using the Cloud to eliminate all the complexity of mission critical databases

How does Autonomous Database work?

Full Database Lifecycle Automation

Provision

Rapidly and easily creates mission critical databases

- Creates **Exadata⁺** Cloud Infrastructure
- **Real Application Clusters⁺** scale-out database

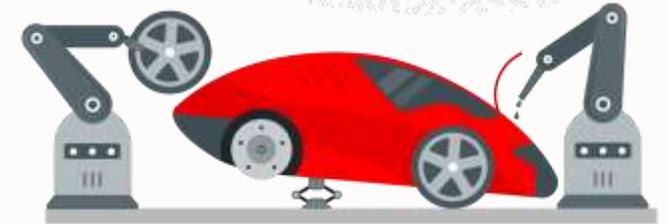

⁺ Unique to Oracle

Secure

Protects data from all external and internal threats

- Continuous threat detection
- Applies security **updates online⁺**
- Prevents admin snooping, **encrypts** all data

Manage

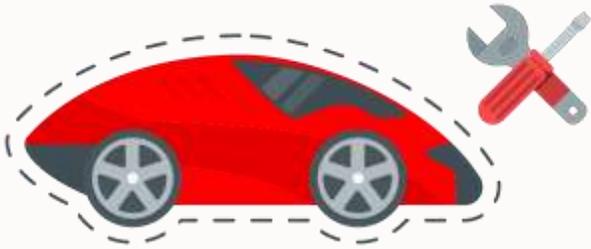

Automates all infrastructure and database maintenance

- Patches all software **online⁺**
- Tunes settings
- Performs **all OS and SYSDBA** operations

How does Autonomous Database work?

Full Database Lifecycle Automation

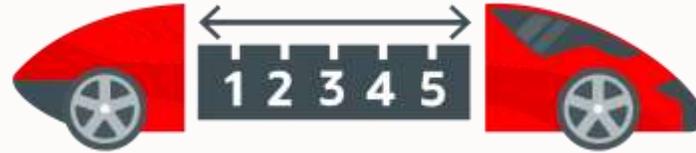

Protect

Recovers from any failure without downtime

- Automates backup, restore, **application transparent**⁺ cluster failover, diagnoses and repairs **errors**⁺

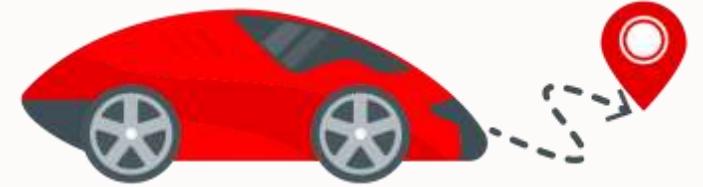

⁺ Unique to Oracle

Scale

Scales online for highest performance and lowest cost

- Instant online elasticity**⁺ of **serverless** compute and storage
- enables **true pay-per-use**⁺

Optimize

Optimally runs workloads without human direction

- Automatically optimizes **data formats, parallelism**⁺ memory, and plans for each workload

Fully automated data protection

Highly available out of the box, 99.95% SLA with cross-region Autonomous Data Guard

Built-in highly-available, self-healing infrastructure

Automatic recovery for server/storage failures

Autonomous Data Guard

Primary
(Ashburn)

Standby
(Phoenix)

Enhanced protection against disasters

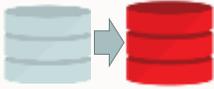

Now with cross-region standbys

Types of downtime and recovery objectives

Types of downtime

UNRECOVERABLE
OR SITE FAILURE

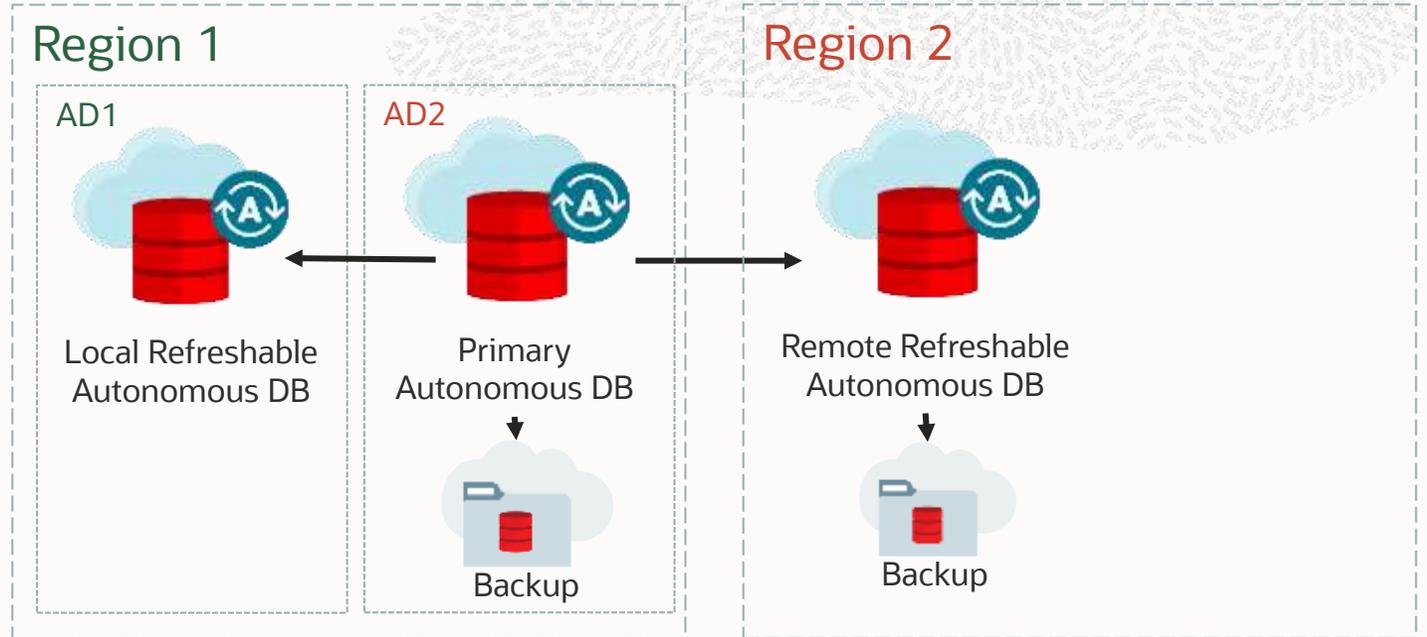

Recovery objectives

Autonomous Database - Shared: protection out of the box

AVAILABILITY / AUTOMATION *

✓	 RMAN	Backup from primary and standby to 3-way mirrored object storage via Autonomous Backups
✓	 RAC	Exadata inherent HA, QoS and Performance benefits Services out of the box
✓	 AUTONOMOUS DATA GUARD	Via console (max 2 Standbys: 1 local and 1 remote, ADB-S only) ¹ Automatic failover if zero data loss
✓	 GOLDEN GATE	Manual (capture & delivery)
	MAA LEVEL	Out of the box + AuDG

Outage Matrix

	PLANNED MAINTENANCE	Zero  Zero
	UPGRADE	Zero  Minutes
	RECOVERABLE FAILURE	Zero  Secs
	UNRECOVERABLE FAILURE	Last refresh  Minutes

- * Legend:
- ✓ Out of the box
 - ✓ Automated via control plane
 - ✓ Manual setup
 - ✗ Not available/possible

Load

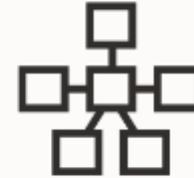

Simple drag & drop loading
([DEMO](#))

Transforms

Declarative transformations
and data cleansing ([DEMO](#))

Data Analysis

Automatically create powerful
business models ([DEMO](#))

Guided discovery of hidden
patterns and anomalies ([DEMO](#))

Graph

Prepare and explore graph
data ([DEMO](#))

ML Model

Easily create models with
AutoML ([DEMO](#))

Deploy

Integrate ML models into
apps via REST or SQL ([DEMO](#))

Build

Low-Code app-dev platform
(APEX)

Built-in zero-code intelligent data loading tool

What do you want to do with your data?

- LOAD DATA**: Import data into your autonomous database.
- LINK DATA**: Leave your data in place and let your autonomous database access it.
- FEED DATA**: Setup an on going feed of new data into your autonomous database.

Where is your data?

- LOCAL FILE**: Select text or Excel files from your local device.
- DATABASE**: Select tables from your remote databases.
- CLOUD STORAGE**: Select buckets from cloud storage (Oracle, S3, Azure, Google).

Explore and Connect

- EXPLORE**: Inspect data in your autonomous database.
- DATA LOAD JOBS**: Check your Data Load Jobs.
- CLOUD LOCATIONS**: Manage connections to your cloud storage (Oracle, S3, Azure, Google).

Getting Started

- Setup an Ingest Job**: Select how you want to analyze your data and where it is. Link and Feed data are only available for network sources.
- Explore**: Explore data in your autonomous database.
- Manage**: Manage your cloud storage locations.

Data Entities

Connection: MOVIE_STREAM

Schema: QTEAM

Name:

QTEAM

- COUNTRIES
- DAYS
- DEVICES
- MONTHS
- MOVIE_SALES_2020
- MOVIE_SALES_2020_Q2

DATA TRANSFORM | DATA PREPARATION | MACHINE LEARNING | TEXT | ORACLE SPATIAL AND GRAPH

Data Cleanse | Substitution | Equi_Width Binning | Quantile Binning | Lead | Lag | Replace

Fix_AllCap_Days

Name: Fix_AllCap_Days

Description: Convert upper-case day names to title case.

Help: Perform data cleansing operations on selected columns:
- Replace Null strings with blanks
- Replace Null numeric fields with 0/mean/median
mean: avg function is used to find the average value of data.
median: is an inverse distribution function

Simple “drag-and-drop” data transformations

- Auto code generation for all ODI sources and targets including Fusion, NetSuite and Salesforce
- Built-in data quality

Based on Oracle Data Integrator

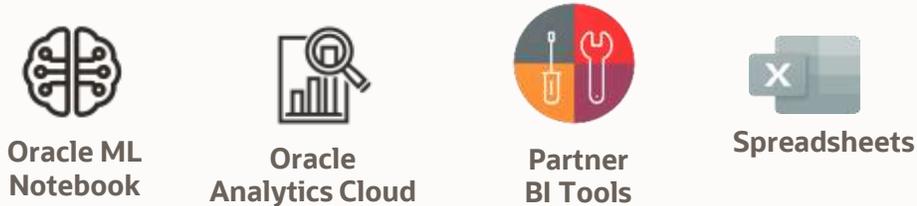

- New, easy-to-use web UI
- Simple migration to ADB for ODI customers
- Exposes all built-in database operators

ORACLE

What is Autonomous Database?

Multiple Deployment Choices

What is Autonomous Database?

Family of products based on a common platform, optimized for specific workloads

Autonomous Data Warehouse

Autonomous Transaction Processing

Optimized for Low-Code

Optimized for JSON

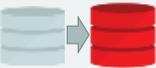

Optimized for Graph

Autonomous Database - Shared: automatic backup

	SCHEDULING	<ul style="list-style-type: none"> Automatically done by the service (full every 60 days, daily incremental, weekly cumulative, hourly archivelog)
	DESTINATION	<ul style="list-style-type: none"> Service-managed bucket, no direct customer access
	REPLICAS	<ul style="list-style-type: none"> 3-ways mirrored backup
	CREDENTIALS	<ul style="list-style-type: none"> Managed internally Automatic password rotation
	WALLET	<ul style="list-style-type: none"> TDE wallet managed and backed up by Oracle
	RESTORE	<ul style="list-style-type: none"> In-place restore only Duplicate from backup is supported if the source is available or if within the retention window
	FAILOVER	<ul style="list-style-type: none"> Backup runs independently of node availability
	STANDBY	<ul style="list-style-type: none"> Backup follows the primary automatically after role change. No standby backup.
	CHARGING	<ul style="list-style-type: none"> No charge for automatic backups For object storage and number of requests, when doing manual backups

Autonomous Database - Shared: Autonomous Data Guard via control plane

	SETUP	<ul style="list-style-type: none"> • 1-click setup from control plane • Only via PDB hot clone
	TOPOLOGY	<ul style="list-style-type: none"> • Setup of 1 standby within region (across ADs where applicable) and 1 across regions • Remote region destinations predefined based on latency • Only possible between ADB-S
	PROTECTION	<ul style="list-style-type: none"> • Asynchronous configuration (RPO up to 1 minutes, RTO up to 2 minutes) • Automatic failover available if no data loss can be guaranteed • RTO does not include detection time
	ROLE CHANGES	<ul style="list-style-type: none"> • Switchover and failover available through control plane • Connection string does not change
	OPEN MODE	<ul style="list-style-type: none"> • No access to standby database • Additional read-only clones can be created and refreshed manually
	PATCHING UPGRADE	<ul style="list-style-type: none"> • Primary and standby are patched independently • PDB can be relocated to upgraded database

Autonomous Database Training Plans
